# Bodhi Statistics for Fedora 29 (September)

Fedora QA Team

1 Summary of comments according to karma.

This table sums up how users provide comments. Usually, when users comment, they might or might not give Bodhi karma at the same time. This table shows how many comments in the dataset have included karma, either positive or negative, and how many comments have been given with no karma.

total comments	3000
comments with positive karma	2510
comments with negative karma	102
comments with no karma	388
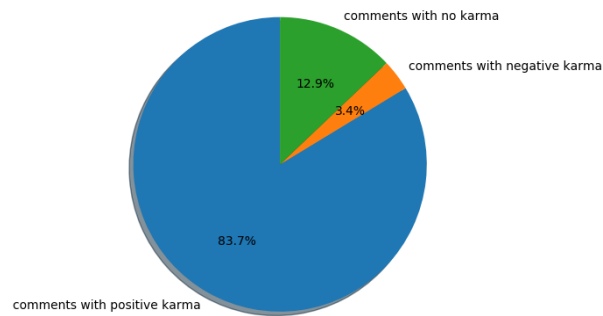

2 Summary of karma according to users

This table provides another view on comments and karma. It shows how many comments, with or without karma, are provided by Red Hat users and by other users. Usually, the comments provided by the community are far more numerous than those of the Redhatters.

total comments	3000
total comments without karma	388
comments without karma redhat	132
comments without karma others	256
total comments with karma	2612
comments with karma redhat	428
comments with karma others	2184
most comments by	See table below
most karma by	See table below
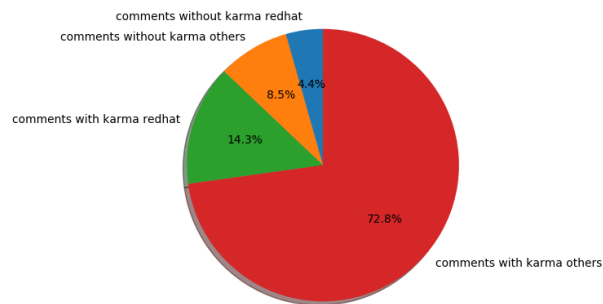

2.1 most comments by

anonymous	44
adamwill	27
kalev	15
mattf	12

raphgro	10
bowlofeggs	9
kdudka	9
tis	9
muench	6
santiago	6

2.2 most karma by

cserpentis	316
pwalter	228
filiperosset	186
besser82	153
lobocode	123
kuosmanen	76
bojan	54
hreindl	53
lnie	52
renault	51

3 Summary of comments

This table shows the total numbers of commented and uncommented updates. Every update receives comments automatically by the Bodhi bot - bodhi. These comments are not taken into account whe creating this summary.

total updates	843
commented updates	264
uncommented updates	579
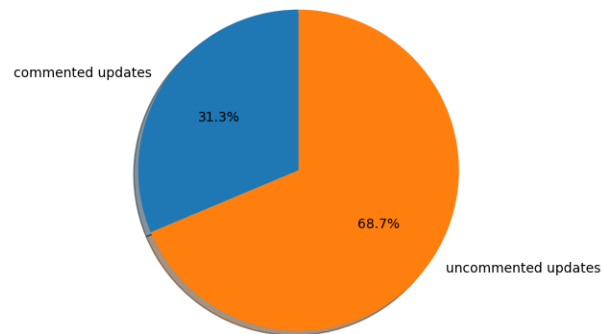

4   Most commented updates

This table shows the most commented updates (packages). If a package gets lots of comments, there usually is a reason for this. Such packages are either the most important, such as kernel packages, the most popular, such as various popular applications, or the most problematic ones with a severe malfunction.

| most commented update	See table below

4.1   most commented update

5 Summary of updates according to karma

This table shows the status of updated packages according to their final karma. Packages that receive any particular amount of positive karma are packages that have been confirmed to be working by at least one person (or automated test suite). Packages with overall negative karma have been tested and found problematic. Packages with neutral karma have either not been individually tested, or they have, but their karma is now balanced to zero.

updates with positive karma	244
updates with negative karma	4
updates with neutral karma	595
